

SofTrack Workstation Availability

Real-time web-enabled utilization views

Overview

SofTrack gathers real-time intelligence of which workstations are in-use, available and powered down or asleep. View real-time logon activity for your Windows® workstations and Terminal Server Sessions including those provided by Citrix®. Workstations can easily be grouped by location, department, or other criteria utilizing Active Directory groups or manual selection. Web-ready HTML based real-time summary and detail reports provide quick access to where workstations are available. SofTrack's workstation availability reporting is web-ready, suitable for easy display on mobile devices and can be quickly and easily used by your students to locate an available lab and computer.

Benefits

- Fully automated collection and real-time reporting of workstation availability by location, department, lab;
- Continuously updated workstation availability reports that are web-ready provide your staff and students with up to the minute availability of your workstations by building, lab, room and so on;
- Report Summary by workstation grouping with optional details link revealing specific status of each workstation;
- Fully document workstation utilization, providing you with the evidence you need of how frequently workstations are actually used, plan for upgrades and replacements;
- Optionally track user activity at each workstation including websites viewed, applications used, length of logon per user.

Features

- Operates as a local service at each workstation and terminal server to seamlessly provide real-time logon transaction data;
- Captures user name, computer name, session identifier, session remote IP address, local IP address, total time logged on and total locked time;
- Define workstation groups to track your computers by location, Active Directory Group or other criteria;
- Daily utilization bar chart reports number of workstations and/or sessions in-use;
- Current usage graph includes provides insight into the number of workstations actively in-use, off or in power-sleep mode and powered on with no one logged on;
- Workstation availability can include version of Windows® and resolution of the workstation's primary monitor to further assist your staff and students;
- Customizable logo graphic and page title and footer allow you to personalize the web pages generated.
